1. Write the ratio 20 students to 5 computers as a unit rate. Create a table to show how many computers 32 students will have.

| Students | 20 | 32 | 36 | 48 | 60 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Computers | 5 |  |  |  |  |

a. Determine whether the ratio of students to computers is in proportional relationship, explain how you know!
b. What is the constant of proportionality?
c. Write the equation to represent the information in the table.
d. Identify the unit rate!
2. Luz earns $\$ 400$ for 40 hours of work. Create a ratio table to determine how much she earns for 6 hours of work.

| Money <br> Earned | $\$ 400$ |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Hours |  | 40 | 45 | 50 | 55 |

a. Determine whether the ratio of money earned to hours worked is in proportional relationship, explain how you know!
b. What is the constant of proportionality?
c. Write the equation to represent the information in the table.
d. Identify the unit rate!
3. Create a graph to represents the price of the bananas at one store.

| Price (y) |  |  | $\$ 1.00$ | $\$ 1.50$ |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Pounds <br> $(x)$ | 1 | 2 | 4 | 6 | 8 | 10 |

1. Find the unit rate.
2. Determine whether the ratio of price to pounds is in proportional relationship, explain how you know!
3. Use the table to create a graph with the given ratios.
4. What is the constant of proportionality?

Fill in the ratio table; be sure to label all parts.
Find the unit rate for driving 168 miles in 6 hours. Use the unit rate to find the distance that could be driven in 7 hours. Create a table to represent the information.

|  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- |
|  |  |  |  |  |

1. The unit rate is $\qquad$ .
2. At this rate, $\qquad$ miles can be driven in 7 hours.
3. Use the data to create a table to find out how many miles could be driven in 14 hours.
