Rotation - turning a figure about a fixed point

How can we turn objects?
1.
2.

We need to know the two "D's" of rotations:
1.
2.

After a rotation has been performed, is the image going to be similar or congruent? Explain.

## Example:

1. Triangle $A B C$ is labeled on your graph below.
a) Rotate Triangle $A B C, 90^{\circ}$ counterclockwise. Label the triangle $A^{\prime} B^{\prime} C^{\prime}$.
b) Rotate Triangle $A B C, 180^{\circ}$ counterclockwise. Label the triangle $A^{\prime \prime} B^{\prime \prime} C^{\prime \prime}$.
c) Rotate Triangle $A B C, 270^{\circ}$ counterclockwise. Label the triangle $A^{\prime \prime \prime} B^{\prime \prime \prime} C^{\prime \prime \prime}$.

2. Organize your results from Part A in the table.

| Starting <br> Point | $900^{\circ}$ <br> Rotation CC | $\mathbf{1 8 0}^{\circ}$ <br> Rotation CC | $\mathbf{2 7 0}^{\circ}$ <br> Rotation CC | $360^{\circ}$ <br> Rotation CC |
| :--- | :---: | :---: | :---: | :---: |
| $\boldsymbol{A ( 1 , 4 )}$ |  |  |  |  |
| $\boldsymbol{B}(5,2)$ |  |  |  |  |
| $\boldsymbol{C ( 2 , 0 )}$ |  |  |  |  |

3. Complete each rule for finding the image of any point $(x, y)$ under the given rotation.
a) $90^{\circ}$ rotation about the origin:
$(x, y) \quad \rightarrow \quad(\quad, \quad)$
b) $180^{\circ}$ rotation about the origin:
$(x, y) \quad \rightarrow \quad(\quad, \quad)$
c) $270^{\circ}$ rotation about the origin:
$(x, y) \quad \rightarrow \quad(\quad, \quad)$
d) $360^{\circ}$ rotation about the origin:
$(x, y) \quad \rightarrow \quad(\quad, \quad)$
4. What are the coordinates of $(3,-2)$ under a $90^{\circ}$ counterclockwise rotation about the origin?
5. What are the coordinates of $(-5,4)$ under a $180^{\circ}$ counterclockwise rotation about the origin?
6. What are the coordinates of $(3,2)$ under a $90^{\circ}$ clockwise rotation about the origin?
7. 

a. Draw the final image created by rotating triangle $R S T 90^{\circ}$ counterclockwise about the origin and then reflecting the image in the $x$-axis.

b. Draw the final image created by reflecting triangle $R S T$ in the $x$-axis and then rotating the image $90^{\circ}$ counterclockwise about the origin.

c. Are the final images in parts (a) and (b) the same? Why or why not?

## Rotation Summary
